

Phase 2

Ideation Phase – Empathize & Discover

Date	30 September 2026
Team ID	SWTID-2026-2859
Project Name	AUTO TICKET CLASSIFICATION USING FLOW DESIGNER
Team Size	5
Maximum Marks	4 Marks

Empathy Map – Auto Ticket Classification Using Flow Designer

Objective: Understand how service-desk users and support agents experience ticket creation, classification, routing and resolution, and identify their needs, frustrations and expectations.

HEARS - Employee requests - Support feedback - SLA reminders	THINKS & FEELS - Wants faster resolution - Finds manual sorting repetitive - Worries about wrong classification - Expects consistent handling	SEES - Incoming ticket queue - Different issue types - Repeated manual classifications
SAYS "Tickets should reach the right team." "I spend too much time sorting tickets." "Classification should be automatic."	USER / SUPPORT AGENT Needs accurate classification, quick routing and less manual work.	DOES - Creates/updates tickets - Reads descriptions - Selects category/priority - Assigns/reassigns tickets
PAINS - Manual effort - Wrong routing - Rework and delays	GAINS - Automatic classification - Faster assignment - Consistent routing - Better SLA adherence	OPPORTUNITIES - Flow Designer automation - Rule/keyword classification - Automatic assignment and notifications

Key Insights

- Users need tickets to be classified and routed with minimal manual intervention.
- Support agents need consistent categories and priority decisions.
- Incorrect classification creates reassignment, delay and additional workload.
- Flow Designer can automate classification, assignment, notifications and status updates.
