

PROJECT IMPLEMENTATION – PHASE IV

Implementation, Demonstration&Final Validation

Date	30 September 2026
Team ID	SWTID-2026-2859
Project Name	Auto Ticket Classification using Flow Designer
Maximum Marks	4 Marks

Implementation Objective

Implement the Auto Ticket Classification solution in ServiceNow using Flow Designer so tickets are classified and routed according to relevant ticket fields and predefined rules.

Implementation Steps

Step	Activity	Expected Outcome
1	Create/configure required ServiceNow ticket fields and flow inputs.	Required ticket data is available.
2	Create the Flow Designer flow for automatic classification and routing.	Flow is available for configuration.
3	Add conditions/actions that check ticket fields and determine classification.	Flow returns correct classification and routing decision.
4	Test the flow using valid, invalid and different ticket conditions.	Tickets are classified and routed correctly.
5	Review results and verify no unnecessary delay.	Automation works consistently and efficiently.

Demonstration Scenarios

Scenario	User / Ticket Condition	Expected Demonstration Result
Demo-01	Valid ticket details + normal priority	Ticket classified and routed successfully.
Demo-02	Different category / priority	Ticket follows correct classification rule.
Demo-03	Valid ticket with special routing condition	System follows defined Flow Designer rule.
Demo-04	Empty / unexpected field value	System handles condition safely without incorrect routing.

Final Validation Checklist

Check	Validation	Status
1	Flow is active and applied to intended ticket process.	To be filled
2	Field-based classification condition works correctly.	To be filled
3	Tickets are routed to correct assignment group.	To be filled
4	Functional and performance tests are completed.	To be filled
5	Project demonstration is completed.	To be filled

Final Outcome

The completed project demonstrates automatic ServiceNow ticket classification and routing using Flow Designer. The implementation is validated through functional and performance checks.
